

SUMMARY

Entry-level Data Science and Machine Learning candidate with hands-on experience building end-to-end ML pipelines in Python – from data cleaning and feature engineering through model training, evaluation, and interpretation. Delivered projects in stock signal classification and customer segmentation using Scikit-learn, Pandas, and NumPy, with a strong grounding in statistics, SQL databases, and software development. Also brings professional frontend development experience, adding a practical edge in building and shipping data products end to end. Seeking an entry-level Data Science, Machine Learning, or Data Analyst role.

TECHNICAL SKILLS

Programming	Python, SQL, JavaScript
Data Science	Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA), Data Visualization, Feature Engineering, Statistical Analysis
Machine Learning	Linear Regression, Logistic Regression, Decision Trees, Random Forest, KNN, SVM, Naive Bayes, K-Means Clustering
Python Libraries	Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, yfinance
Databases	MySQL, PostgreSQL, MongoDB
Tools	Jupyter Notebook, Google Colab, VS Code, Git, GitHub
Web Development	React.js, Next.js, TypeScript, Tailwind CSS, REST API Integration

MACHINE LEARNING PROJECTS

Stock Buy/Sell/Hold Prediction System

| Machine Learning Project | [GitHub Repo](#)

- Built an end-to-end ML pipeline classifying stock market conditions into Buy, Sell, and Hold signals from historical OHLCV data pulled via the `yfinance` API, covering [XX] tickers / [XX] months of data.
- Engineered technical indicator features (moving averages, RSI, MACD) that lifted model performance by [XX]% over a price-only baseline.
- Trained and benchmarked Logistic Regression, Decision Tree, Random Forest, and SVM classifiers; best model (Random Forest) achieved [XX]% accuracy and [XX] F1-score on held-out test data.
- Visualized price trends, indicator behavior, and prediction confidence with Matplotlib/Seaborn to validate model decisions against real market moves.
- Structured the workflow (preprocessing → feature engineering → training → evaluation) as reusable, version-controlled modules for reproducibility.

Customer Segmentation & Purchase Behavior Analysis

| Machine Learning Project | [GitHub Repo](#)

- Segmented [XX,XXX] customers into [X] behavioral groups using K-Means clustering on RFM (Recency, Frequency, Monetary) features derived from transactional data.
- Cleaned and transformed raw transaction records (handling missing values, outliers, and feature scaling) with Pandas and NumPy ahead of modeling.
- Identified a high-value segment representing [XX]% of customers but [XX]% of total revenue, along with an at-risk segment showing declining purchase frequency.
- Trained supervised classifiers (Logistic Regression, Random Forest) to predict segment membership for new customers, reaching [XX]% accuracy for use in targeted marketing.
- Translated cluster profiles into concrete retention and targeting recommendations, presented through Matplotlib/Seaborn visualizations.

ADDITIONAL PROJECT

Medical Appointment & Record Management System

| Academic Project | [GitHub Repo](#)

- Built a full-stack medical appointment and record management system (PHP, MySQL) supporting [XX]+ patient records and role-based access for [X] user types (admin, doctor, patient).
- Designed a normalized relational schema ([X] tables) and implemented secure database connectivity for appointment scheduling and record retrieval.
- Implemented authentication and access control to protect patient data, applying basic application security practices (input validation, session handling).
- Built responsive interfaces across the booking and records workflows, gaining practical experience in backend architecture and database design.

EXPERIENCE

Frontend Developer Intern

| Lacspace | 2025

- Completed a frontend development internship, contributing to real-world web development projects as part of a product team.
- Developed and maintained responsive user interfaces using React.js and modern frontend development practices.
- Built reusable UI components and integrated REST APIs for dynamic data rendering.
- Collaborated with team members to implement client requirements and improve application usability and responsiveness.

EDUCATION

Bachelor of Science in Computer Science and Information Technology (B.Sc. CSIT)

| Expected Graduation: 2026

Asian College of Management and Technology, Kathmandu, Nepal

Relevant Coursework: Artificial Intelligence & Machine Learning, Data Science, Python Programming, Statistics, Database Management Systems

CERTIFICATION

- Artificial Intelligence, Machine Learning & Data Science – IT Skills Training Nepal (ISTN), 1.5-Month Intensive Program

ADDITIONAL INFORMATION

Interests	Data Science, Machine Learning, Predictive Analytics, Data Visualization
Professional	Problem Solving, Team Collaboration, Adaptability, Continuous Learning
